Color Me Mars! The Perseverance Mars Rover

In the image above, scientists install science instruments into the body of the Perseverance Mars rover. You can see the sample tubes that will store material collected from the Martian surface. Perseverance will drive across Jezero crater and gather samples that might contain biosignatures of ancient life. The best samples will then be stored in these tubes and returned to Earth by a future Mars Sample Return mission.

What science instrument would you install on a mission to Mars? Draw your instrument in the empty box!
